

Sealed-holdout contamination audit

1. Real tabular / time-series records

2. Seal a future holdout (never shown to any generator or mixer)

3. Fit generator on the train slice only

4. Replace fraction r of train rows
($r = 0, 0.1, 0.3, 0.5, 0.7$)

5. Train an ordinary downstream model

6. Score sealed holdout, diversity, ECE
